THICKSHAKE MIX

Thickshakes are a big business in Australia, worth tens of millions. Major brands mostly hold this market to themselves through expensive machinery and specifically manufactured liquid dairy bases.

But thanks to a joint development with a major ice cream machinery company, we are now able to offer a Thickshake Machine that is low cost, extremely easy to use, and very effective.

No Milkshake blending stage is required using this combination:

1. Take pre-flavoured Thickshake directly from the machine

OR

2. Pour Thickshake base directly into a serving vessel, and add syrup to it for characterisation - this can be added before pouring, during or afterwards. Mix into the Thickshake with a long handled spoon for a few seconds to combine.
